#### **DETAILED ACTION**

1. Applicant's After Final Amendment filed 7/23/2004, with respect to claims 1-8, 11-13, 29-30 and 45 are acknowledged. Therefore, the finality of the previous Office Action has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Ten Cate (6,352,683).

### Claim Objections

2. Claims 1 and 45 are objected to because of an informality, which can be corrected as follows: in line 3, "a first material carried by the stent containing" should be replaced by – a first material carrying --. Appropriate correction is required.

## Claim Rejections - 35 USC § 102

- 3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
  - (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8, 11-13, 45, 47-50 and 54-60 are rejected under 35 U.S.C. 102 (e) as being anticipated by Ten Cate (U.S.6,352,683).

Ten Cate shows in figures 3-4, a stent or other implantable medical device that releases drug into the vascular system having the limitations of claims 1 and 45, including: a first material (labeled in col.6, lines 1-11) carrying a therapeutic substance. A second material (col.2, lines 1-14) configured to convert a first type of energy to a second type of energy. In fact, Ten Cate discloses that the drug delivery system is characterized by the combination of a carrier material

Page 3

Art Unit: 3731

which reflects or absorbs or emits electromagnetic waves for delivering the carrier material and the drug to a specific site. Ten Cate does so to indicate that the electromagnetic waves are intended to comprise heat which are reflected or emitted in the form of energy through a space or through a material medium (see col. 5, lines 3-11). Regarding the intended use of a stent for delivering a therapeutic substance; a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In the instant case, the device of Ten Cate would have been capable of performing the use as claimed.

Regarding claims 2-4 and 47-49, where the second material is selected from the group consisting of Au particles (labeled in col.2, lines 1-8). The second type of energy is thermal energy; and wherein the second material is disposed in microdepots or mircroparticles (col. 2, lines 14-20).

Regarding claims 5-6 and 50, where a topcoat (20) deposits over a portion of the first material; and wherein the second material includes Au particles (col. 2, lines 1-8).

Regarding claims 7-8 and 54-55, Ten Cate discloses that the device as seen on fig. 3 is capable of using more than one materials configured to convert more than one energy (see col. 11, lines 12-34).

Regarding claims 11-13 and 56-58, where the first material is hydrogel (col. 6, lines 10-11) which is selected from polypeptides and mixtures thereof (col. 12, lines 45-65 and col. 13, lines 1-20). Regarding claims 31-32 and 59-60, Ten Cate discloses the hydrogel characteristic as claimed (in col. 6, lines 8-54).

### Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 29-30 and 51-53 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Ten Cate' 683. Ten Cate is silent regarding the diameter of Au particles having a silica nanoparticle from 100 to 250 nm or having a thickness of 1 to 100 nm. Nevertheless, Ten Cate does disclose Au particles, which must be changed in the size of a component involve merely routine skill in the art. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to make Ten Cate' the diameter of Au particles having a silica nanoparticle from 100 to 250 nm or having a thickness of 1 to 100 nm. Regarding claims 10 and 46, it would have been further obvious to one having ordinary skill in the art at the time the invention was made to have electromagnetic waves with wave lengths between 800 and 1200 nm into thermal energy, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

#### Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
